

Saxi Typ A

General description

Typ A is a classical folding door that has been manufactured since 1949. The door is fitted in a range of applications from Bruno Mathsson homes to nursery schools and parishes all over Sweden. Typ A is available in a variety of designs and sizes, all according to preference.

Design

Saxi Typ A consists of a sliding steel mechanism on which three layers of vertical slats of pine are built into a frame. The door is 60 mm thick. In the upper part of the frame there are custom-designed carriages that run freely in ceiling rails. The folding door can be adapted to suit an existing frame, where we also take into account rebates, which means you can replace a conventional door without cutting into the frame. The model is also available as a double door design.

Surface

The door is in a range of colours and material combinations on both sides. The door can be delivered in textiles, leather or pvc according to agreement.

Locking

Saxi Typ A is delivered with cremone lock as standard. Key or cylinder locks are available as an option. Lock case is mounter concentric.

Montering

Each order is manufactured according to the dimensional data received. If the opening exceeds 1.8 m the wall will be produced in section (aprox. 1.2m). These are hung on the ceiling profile and then screwed together.

Guarantee

A 2 years guarantee for material and installation done by Saxi Vagg AB.

Application

Width (Bs)	0.6 - 7.5 m
Width (Bd)	1.5 - 15.0 m
Height (H)	0.7 - 2.7 m
Suspension	Ceiling
Total weight	7 - 10 kg / m ²
Operation	Manual
Adaptation	Can be mounted in existing door frame

Sound reduction	R'w
Field values	ca 18 dB
